

## 065-79SXEDMG-H Small Form-factor Pluggable (SFP) Hardened Gigabit Interface Module

The Signamax 065-79SXEDMG-H is a Small Form-factor Pluggable (SFP) hardened multimode fiber module that supports Gigabit Ethernet over 62.5 micron and 50 micron multimode fiber cable at distances up to 2 kilometers, and allows operation from -40° F to 185° F (-40° C to 85° C). It adheres to the IEEE 802.3z standard for Gigabit Ethernet over multimode fiber at 1300 nm, and is a cost-effective method of providing changeable Gigabit Ethernet interfaces to switches and media converters equipped with a standard SFP slot. Note: The 065-79SXEDMG-H must face either another 065-79SXEDMG-H or a 065-79SXEDMG SFP module on the multimode fiber pair for proper operation.

\*\* Maximum distances attainable on multimode Gigabit Ethernet fiber circuits are primarily dependent upon multimode distortion, also known as modal dispersion. Larger aperture fiber optic cable allows more modes to be generated at the launch point; these modes cause the pulse width to spread across a Gigabit Ethernet bit time interval to a point where accurate determination of data (i.e., ones and zeroes) is not possible. These are physical properties that are not specific to this product. These properties also apply to competing products operating in the same frequency spectrum over multimode fiber cable having the same modal bandwidth.
